Pulse - Project Milestone #2

Project Features List

-Twitter Features

-Display recent tweets

-[FUNCTIONAL] Column of recent tweets on the search term will be displayed to the user, stylized in the same manner as twitter.

-[NON-FUNCTIONAL] Tweets will be embedded in cards. Tweets obtained through the Twitter Search API.

-Tweet Sentiment Score

-[FUNCTIONAL] Display graph with the distribution of positive, negative, and neutral tweets.

-[NON-FUNCTIONAL] Systems used: Twitter Search API, TextBlob, Pandas, Matplotlib.

-Popular locations

-[FUNCTIONAL] List the locations where the searched term has been tweeted about most in the last seven days.

-[NON-FUNCTIONAL] Systems used, Twitter Search API, Pandas, Matplotlib. Will log geotags for tweets and the calculate most frequent locations.

- Instagram Features

-Display Recent Posts

-[FUNCTIONAL] Column of popular recent posts containing the searched term.

-[NON-FUNCTIONAL] This will be achieved with the Instagram API. Posts will be formatted as they appear on the Instagram platform. Posts embedded in cards.

- Reddit Features

-Display Recent Posts

- [FUNCTIONAL] Column of popular recent posts containing the searched term.

- [NON-FUNCTIONAL] This will be achieved with the Reddit API. Posts will be formatted as they appear on the Reddit platform. Posts will be embedded in cards, placed into the Reddit column.

- Post Popularity Meter

- [FUNCTIONAL] Include a colored meter on each post that represents upvote - downvote ratio

- [NON-FUNCTIONAL] The Reddit API will be used to find upvote and downvote count of each post that has been looked at, and a Bootstrap progress bar class will be used to visually convey vote ratio.

- YouTube Features

- Search Results

- [FUNCTIONAL] Column that displays x most relevant video titles given a keyword

- [NON-FUNCTIONAL] uses the search functionality in the Youtube Data API & html

- Video search popularity graph/chart

- [FUNCTIONAL] Display the total number of views among the top x videos and a graph of "popularity over time"

- [NON-FUNCTIONAL] Calculates view rate vs. time total views at time x by summing views of search results and noting upload times (would help show rise or fall of popularity of subject matter, provided search results are meaningful). Using Youtube Data API, Matplotlib & html

- Website

- Create user

- [FUNCTIONAL] Allow for account creation.

- [NON-FUNCTIONAL] Form built in HTML and JS.

- Login

- [FUNCTIONAL] Access user account. Will overlay the search screen. Taking style inspiration from the iCloud website.

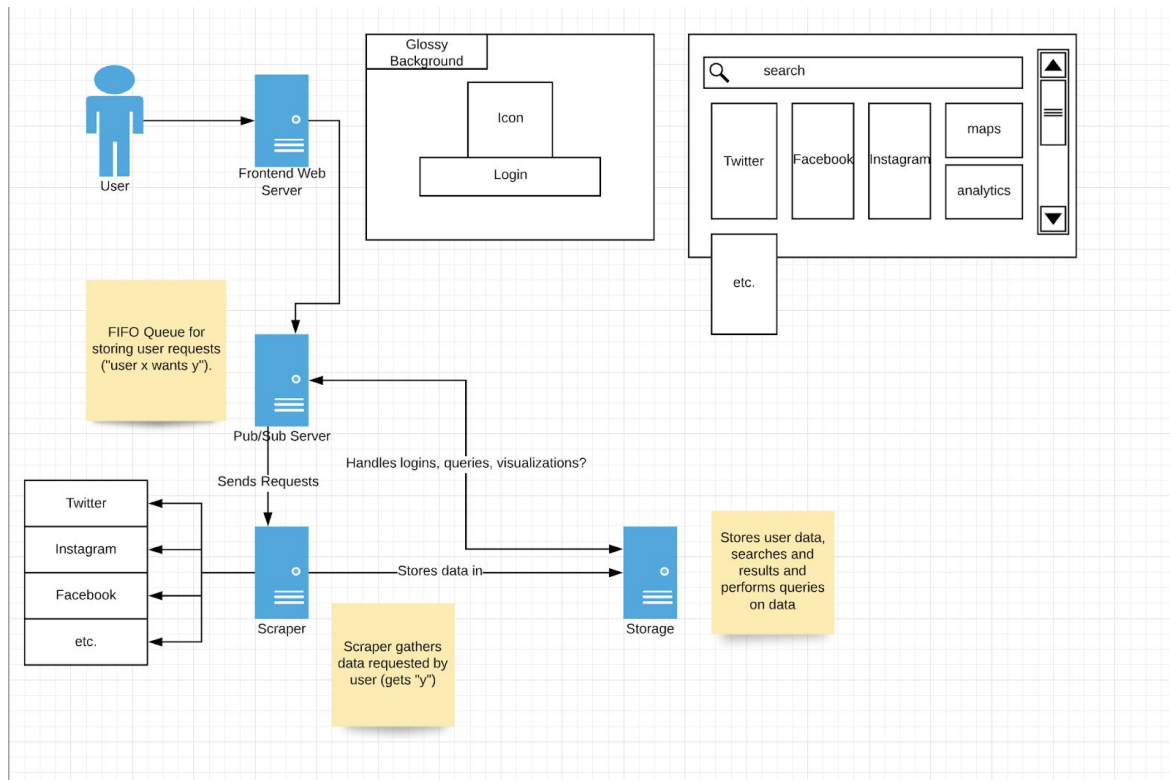

- [NON-FUNCTIONAL] Form built in HTML and JS.

- Homepage

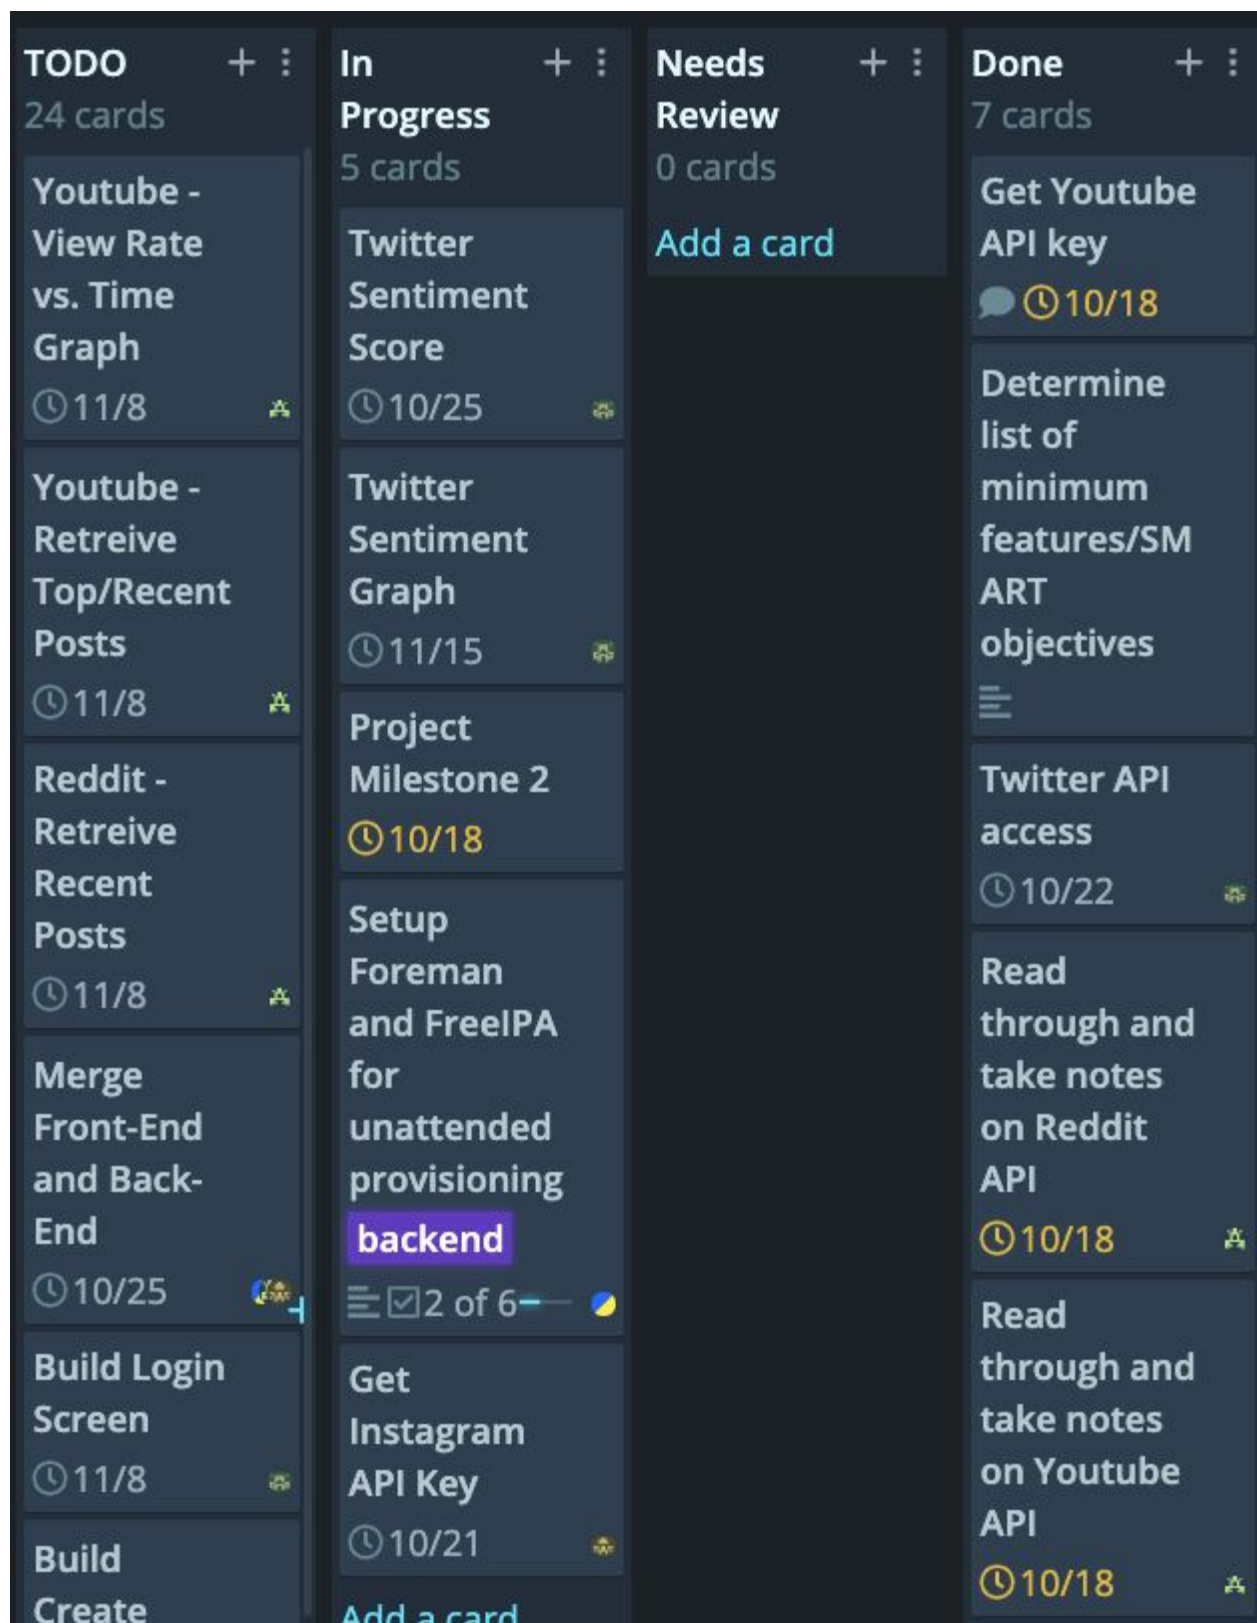

- [FUNCTIONAL] Host the search screen and analytics.

- [NON-FUNCTIONAL] Page built in HTML and JS.
